

# ***INTRODUCTION***

**First of all, thank you for purchasing the “Pick 3” lottery system. With this system, you certainly have a strong chance of winning and, if used properly, will show profits time and time again. In understanding why this will work, you must understand the logic of numbers. There IS a way to juggle and manipulate numbers around that makes incredible sense...and you will hardly believe it once you have digested it completely and start to cash in BIG! The “*Pick-3*” system for daily numbers games was invented as a sophisticated but easy-to-use betting tool, which, if used correctly, can and will win up to thousands of dollars a week. The prospect of winning thousands is certainly not as likely as making several hundred, but hundreds doesn't sound bad...does it? Imagine starting this system for as little as \$18.00 to \$36.00 and reinvesting your earnings daily to perhaps piling up into the thousands of dollars as short as SEVEN days from the start!**

## **SHORT EXPLANATION OF THE PICK 3 DAILY LOTTERY GAME**

**It is important to know that this game is perfect for all types of players. Why? Because you can't be beat! What other game can you win by either matching all 3 numbers in exact order, or play in BOX ORDER, (which means any order to win with a combination of three numbers).**

**Which is the best way to play? Let's begin by analyzing the odds:**

**EXACT ORDER—picking the result exactly from left to**

right as drawn. *Example:* Let's say the number picked is 623. The 623 from left to right is 6-2-3. You win... and you win perhaps a thousand dollars.

**BOX BETS**—Means if you had picked 4-8-7, 8-7-4, 7-8-4, etc...then you win. In other words, we call it “any order.” That is exactly what *boxing* means.

**PLAY 2 NUMBERS OR 1 NUMBER**—Well, that's not a lot of fun to throw perhaps a \$10 bill on a single number. Hey, it's not bad odds...1 out of 10 hit. But the payoff is low and it's only for the fun of it.

So after reviewing these, it is easy to see the best betting scenario is the "Box set."

Looking into the odds of winning in exact order, you are facing a ratio of 1000:1. As good as it sounds compared to 100,000,000:1 in powerball it isn't terribly likely. Then think of Box sets...what do they have to offer?

Of these 1,000 possible numbers, there are three distinct categories: 1.Unmatch—2.Doubles—3.Triples. The first category, Unmatch, are all those numbers in which all three digits are different. For example, the numbers 426, 712, and 248 are all UNMATCH numbers. The second category is that of the DOUBLES. These are numbers in which two of the three digits are identical. For example, the numbers 224, 661, 811 are all considered to be DOUBLE numbers. The final category is comprised of the TRIPLES. These are numbers in which all three digits are identical. For example, the numbers 444, 777, and 111 are all TRIPLE numbers.

To get to the point and make your life easier—and because we did the work for you—there is a grand total of only

**120 possible UNMATCH numbers which can be played in any order (Box Bet form). In the lottery system we will be using, you will be using ONLY these 120 UNmatch possibilities.**

**Now it is time to TALK MONEY...The reason you purchased this brilliant system. The reason of course are the PAYOFFS!**

**In most states, the average payoff for a \$1.00 BOX BET is \$80.00. In Kentucky, I know for sure the payout is exactly \$100.00! (Check for yourself!) \$80.00 as a default figure will be the most important amount of money that we use to calculate our figures. Also, our calculations will always be based upon that \$36.00 figure or if you wish not to pay dollar denominations...you may play \$.50 per unit = \$18.00. Note: given that you decide to use the stated \$18.00 figure, you must repeat DAY ONE 2 times or until you hit the \$80.00 figure. But I personally recommend you do the \$36.00 starting amount. It's better to take that initial booster shot to have large gambling profits to parlay with. However, don't forget, it is still gambling! As the government says, play RESPONSIBLY!**

### **FIRST DAY**

**On DAY ONE you make a \$36.00 investment on the 36 numbers in your "Key" Pick group. You play each of the 36 numbers in BOX sequence at \$1.00. Should your "Key" Pick be correct and an UNMATCH is drawn this day...then BINGO... you win \$80.00.**

### **SECOND DAY**

**On DAY TWO you now put up \$72.00 of your “new” bankroll. Note: Your “Key” Pick number will probably change from day to day. Now play each of the 36 numbers Boxed for \$2.00. Should your “Key” Number hit and the number drawn is an UNMATCH, you win a nice \$160.00. Add this to what was leftover from your winnings and you have a quick \$168.00.**

### **THIRD DAY**

**DAY THREE we bet \$144.00 on the 36 numbers in the “Key” Number group. Play BOXED, of course, for \$4.00 each. Now if your “Key” number shows up in the drawing and it is an UNMATCH set, then you have a quick \$320.00! Add the \$24.00 you had left in the kitty and it gives you a nice \$324.00. (Remember you start at \$36.00!).**

### **FOURTH DAY**

**DAY FOUR you bet \$324.00 on the 36 numbers in your “Key” number group (Remember not to get caught up in your high gamble...don’t forget you aren’t losing any money at this point out of your bank account because you have WON this money!) Again, play BOXED for \$5.00 a piece and again for \$4.00 which is a total \$9.00 bet on each of the 36 numbers. Now the big reason for breaking up your bets in two parts is simple... it’s called being liable for withholding taxes! If all goes well this time...you win \$720.00! (Now you are certainly getting somewhere). If you decide to put all your money into one drawing, don’t forget to declare it!**

### **FIFTH DAY**

**DAY FIVE invest \$720.00. Play the 36 numbers in your “Key” Number group. Play each number for \$5.00 BOXED Four times...meaning a \$20.00 bet on each number. Again if UNMATCH and your “Key” number show up, you**

**win an EASY \$1,600.00. Now your total in the account is \$1620.00!!!**

**DAY SIX and SEVEN... Go to bed and think about your decision to continue. Think hard that you are now up well over \$1,500.00 and decide if you are ready to make the money more than double. If you so decide, your total will jump to \$3,600.00 the following sixth day and I don't even care to get into what you would be making if you invest all of the \$3,600 into the next drawing and win! Remember, you can quit at anytime!!! If you have made a few hundred dollars and are satisfied, you don't have to take the risk! But you may be missing out on additional cash! It is YOUR decision! Just remember you started with \$36.00... a BIG tank of gas is worth that!**

**Moving onward, lets talk about finding that GOLDEN NUMBER...**

**No one can predict with 100% accuracy which of those 10 digit numbers will pop. But remember, in our case we're looking for that "KEY" number to be anywhere including in the 3 numbers we are BOXING... so the question arises "What can you do to make *The Law of Averages* work for you?" The simple answer to this is to look at past performance. --- Get the list of results for at least the last 30 days. 60 days prior is even better because it just might be that you come across a single digit number, like let's say number (2), which only popped maybe two or three times in the last 30-50 days or so. But most importantly, you should at least try to get the last 30 days. They're usually posted in many places where tickets are sold. Ask your Lottery Agent or check the web at [www.\(YourStateInitials\)Lottery.com](http://www.(YourStateInitials)Lottery.com) (Example, If you live in New York, try [www.NYLottery.com](http://www.NYLottery.com) or [www.NYLottery.org](http://www.NYLottery.org). Now get**

out a piece of paper and make 10 columns. Number them on top 0 through 9. Now jot down in each column how many times that particular number has popped anywhere within the 3 numbers drawn daily for the last 30 days. Next, take the number or numbers which make up the **SHORTEST** column or columns and start using those as your “**KEY**” numbers when you begin your new adventure. Now you need to think about **PROBABILITY**... Now let’s see what the real, honest-to-goodness statistics are of what we are accomplishing. As we said earlier, the odds of picking a 3 number in **STRAIGHT** order are 1,000:1. (Meaning there are 1,000 different winning combinations which you must pick **ONE** to win. (Sorry, no system for that!) But with our “**Pick-3**” system, picking just 1 “**KEY**” Number every night in order to win...this lowers the odds down to...well...do the math. Granted, there are doubles in some drawings, but not very often. With the box sets, putting down \$36 on 36 numbers covers 36 combinations out of 120, leaving your chance of scoring a win (if an **UNMATCHED** number) a 36/120 or 30%!!! Compare that to 1,000:1 or a 0.1% chance of winning! And if you study past performance of the **PICK-3** Lottery of your state, you can bring that percentage to a near **FOR SURE WIN!**

**What you have been waiting for...  
THE CHARTS!**

Whatever you decide is going to be your “**KEY**” number then go to this chart and play the calculations under that particular “**KEY**” you choose. Here are the charts:

Should you choose “**KEY**” number (0), Play **THIS GROUP...**
